

GRAPHITE ONE ANNOUNCES \$2.2 MILLION PLACEMENT OF UNITS

AUGUST 27, 2013 - Calgary, Alberta – Graphite One Resources Inc. (GPH: TSX-V; GPHOF: OTCQX) (“Graphite One” or the “Company”) is pleased to announce that, subject to TSX Venture Exchange approval, the Company intends to complete a non-brokered private placement to raise gross proceeds of up to \$2.2 million by the issuance of 27,500,000 units (the “Units”) of the Company at a price of \$0.08 per Unit. Each Unit will consist of one common share and one non-transferable common share purchase warrant (a “Warrant”). Each Warrant will entitle the holder to purchase one additional common share of the Company at a purchase price of \$0.125 per share for a period of 36 months from the date of closing (the “Closing Date”) subject to acceleration as described below.

In the event that, following the restricted period that expires four months from the date of issuance, the average volume weighted average price of the common shares of the Company is greater than \$0.225 per share for any period of 21 consecutive trading days during the term of the Warrant, the Company may at its sole option, provide notice of such event to the holders of any outstanding Warrants and thereafter the outstanding Warrants will expire and cease to be exercisable on the date which is 45 calendar days after the notice is deemed delivered to the holders of the Warrants by the Company.

The proceeds will be used for exploration and development of the Company’s Graphite Creek project and for general working capital purposes.

Closing of the private placement is anticipated to occur on or before September 15, 2013 and is subject to receipt of applicable regulatory approvals including approval of the TSX Venture Exchange. All securities issued in connection with the private placement will be subject to a restricted period that expires four months following the date of issuance. The Company may pay a finder’s fee in cash and/or securities in connection with certain subscriptions on terms to be negotiated by the Company.

This news release does not constitute an offer to sell or a solicitation of an offer to buy any of the securities in the United States. The securities have not been and will not be registered under the United States Securities Act of 1933, as amended (the “U.S. Securities Act”) or any state securities laws and may not be offered or sold within the United States or to U.S. Persons unless registered under the U.S. Securities Act and applicable state securities laws or an exemption from such registration is available.

The Graphite Market

China currently produces approximately 70% of the world’s graphite (world production is approximately 1,100,000 tonnes of which 400,000 is flake graphite) and has recently restricted exports by instituting an export tax. As well, the Chinese government has banned any new graphite plants and imposed strict environmental regulations on existing plants in Qingdao. A state owned amorphous graphite monopoly has been formed which will consolidate 210 amorphous graphite mines down to 20 and will reduce production capacity from 600,000 to 510,000 tonnes per year. The implementation of these new rules and standards will make graphite mines much more difficult to build and/or operate in China. Recently, South Graphite, which was formed in 2011 to consolidate all the amorphous graphite resources in Hunan, China (which is the world’s largest graphite producer) and has a total production capacity of approximately 200,000 tonnes per annum.

Graphite is an allotrope of carbon along with diamonds and coal. Graphite is the best known conductor of heat and electricity. Graphite and graphite powder are valued in industrial applications for their self-lubricating and dry lubricating properties. It maintains its strength and stability to temperatures in excess of 3,000°C and is resistant to chemical attack. Graphite demand was historically driven by the steel and automotive industries. Due to the industrialization of BRIC (Brazil, Russia, India, China) economies, Graphite demand has steadily increased by 5% per annum since 2000. Global graphite demand is growing rapidly and is expected to continue based on new applications and green technologies, including but not limited to: hybrid-electric vehicles (HEVs); plug-in hybrid-electric vehicles (PHEVs); battery-electric vehicles (BEVs); fuel cells; Lithium-Ion Batteries; Pebble Bed Nuclear Reactors; lubricants and Graphene.

As global demand grows, graphite prices have increased substantially, more than doubling over the past three years. Both the European Union and the United States have declared graphite a supply critical mineral.

About Graphite Creek

The Graphite Creek Property comprises 129 claims totaling 6,799 hectares on the Seward Peninsula of Alaska, 65 kilometres north of Nome. Mineralization at the Graphite Creek Property is characterized by coarse crystalline (large flake) graphite (greater than 80 mesh) within graphite-bearing schist(s). Graphite mineralization is exposed at surface. The large flake graphite occurs as disseminations and high grade segregations and lenses in distinctive sillimanite-garnet-quartz-biotite schist(s) and/or quartz-biotite schist(s). The host schist(s) is continuous over 18 kilometres of strike length, based on mapping, sampling and airborne geophysics. Please refer to the January 21, 2013 press release where Graphite One reports the filing of a NI43-101 Technical Report with an inferred resource of 164.5 million tonnes at 4.61% graphite (including 25.44 million tonnes at 9.69% graphite and 7.8 million tonnes at 13.49% graphite).

During 2011, Graphite One tested 3 samples from surface at the Graphite Creek area (where the 2012 drilling was focused) for flake size analysis. The samples analyzed included: (1) high grade rock grab samples (assayed 56.9%C); (2) mixed grade rock grab samples (disseminated and high grade material mixed (assayed 14.5%C)); and (3) rock grab samples with disseminated graphite (assayed 8.2% C). From these samples, 84.3%; 93.6% and 76.5% of graphite recovered are large flakes respectively (greater than 80 mesh). Specifically, the majority of the recovered graphite in the samples is considered to be large flake. Furthermore, the majority of the large flake graphite is greater than 40 mesh (64.8%, 65.8% and 73.3%, respectively) and is considered Jumbo Flake. The analytical work was conducted at Hazen Laboratories, Co, USA.

During 2012, Graphite One tested 4 samples from drill core for flake size analysis. The samples analyzed contained 8.7%, 13.7%, 14.9% and 8.0% Cg, respectively. From these samples 62.9%, 70%, 63.9%, and 59.3%* of the graphite recovered are large flakes (*samples were crushed to 10 mesh so results may be understated because the 2011 samples contained up to 10.5% +10 mesh material). The analytical work was conducted at Hazen Laboratories, Co, USA. Based on the 2011 and 2012 tests, the Graphite Creek Property is known to be a flake graphite deposit whereby the majority of the flake is considered to be large flake.

GRAPHITE ONE
RESOURCES

About Graphite One Resources Inc.

GRAPHITE ONE RESOURCES INC. (GPH: TSX-V; GPHOF: OTCQX) is a mineral exploration company with extensive experience in the state of Alaska and a business strategy to identify, acquire, and explore high potential projects ready for rapid advancement. The Graphite Creek Property on the Seward Peninsula of Alaska fits with the Graphite One business strategy offering significant potential for the discovery and development of a large flake, graphite deposit exposed at surface. Graphite One has an option to earn a 100% interest in the Graphite Creek Property.

Dean Besserer, P.Geol., Vice President of Exploration for the Company and a “Qualified Person” under NI 43-101, is responsible for and has reviewed and approved the technical content of this press release.

Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.

This release includes certain statements that may be deemed to be forward-looking statements. All statements in this release, other than statements of historical facts that address access to capital, regulatory approvals, exploration drilling, exploitation activities and events or developments that the Company expects, are forward-looking statements. Although the Company believes the expectations expressed in such forward-looking statements are based on reasonable assumptions, such statements are not guarantees of future performance and actual results or developments may differ materially from those in the forward-looking statements. Factors that could cause actual results to differ materially from those in forward-looking statements include the Company being unable to complete the private placement on the terms contemplated or at all, market prices, exploitation and exploration successes, continuity of mineralization, uncertainties related to the ability to obtain necessary permits, licenses and title and delays due to third party opposition, changes in government policies regarding mining and natural resource exploration and exploitation, and continued availability of capital and financing, and general economic, market or business conditions. Readers are cautioned not to place undue reliance on this forward-looking information, which is given as of the date it is expressed in this press release, and the Company undertakes no obligation to update publicly or revise any forward-looking information, except as required by applicable securities laws. For more information on the Company, investors should review the Company's continuous disclosure filings that are available at www.sedar.com.

The mineral resource estimates reported in this press release were prepared in accordance with Canadian National Instrument 43-101 Standards of Disclosure for Mineral Projects (“NI 43-101”), as required by Canadian securities regulatory authorities. For United States reporting purposes, the United States Securities and Exchange Commission (“SEC”) applies different standards in the classification of mineralization. In particular, while the terms “measured,” “indicated” and “inferred”

GRAPHITEONE
RESOURCES

mineral resources are required pursuant to NI 43-101, the SEC does not recognize such terms. Canadian standards differ significantly from the requirements of the SEC. Investors are cautioned not to assume that any part or all of the mineral deposits in these categories constitute or will ever be converted into reserves. In addition, “inferred” mineral resources have a great amount of uncertainty as to their existence and great uncertainty as to their economic and legal feasibility. It cannot be assumed that all or any part of an inferred mineral resource will ever be upgraded to a higher category. Under Canadian securities laws, issuers must not make any disclosure of results of an economic analysis that includes inferred mineral resources, except in rare cases.
