A U.S.-based Supply Chain Solution to Meet the Tech Sectors’ Rising Graphite Demand

SEPTEMBER 2021
Forward Looking Statements

This presentation includes certain statements that may be deemed to be forward-looking statements. All statements in this presentation, other than statements of historical facts, are forward-looking statements. Generally, forward-looking information can be identified by the use of forward-looking terminology such as "intent", "intends", "preliminary", "projections", "projected", "trends", "approach", "suggests", "proposed", "expects", "is expected", "scheduled", "estimates", "assumes", "believes", "indicates", or variations of such words and phrases that state that certain actions, events or results "may", "could", "would", "might" or "will be taken", "occur" or "be achieved".

Forward-looking information in this presentation may include, but is not limited to, statements regarding the stage and progress of development of the Graphite One Project including the ability to actually produce spherical graphite and other value-added products, ultimate further and final results of additional test work, estimated capital and sustaining costs and the availability of equipment, labor and resources required, the anticipated applications of graphite in high-tech, clean tech, energy storage and national security applications and all other anticipated applications, market demand and ability to transport and enter into such markets, successful completion of the Pre-Feasibility Study and a subsequent Feasibility Study, successful completion of the 2021 Field Program, assessment of the results from the 2021 Field Program, the ability to produce new potential source of advanced graphite products, are all forward-looking statements. Although the Company believes the expectations expressed in such forward-looking statements are based on reasonable assumptions, such statements are not guarantees of future performance and actual results or developments may differ materially from those in the forward looking statements. Factors that could cause actual results to differ materially from those in forward-looking statements include: (i) volatile stock price, (ii) the results of the product development test work may not be indicative of the advancement of the project as anticipated, or at all, (iii) market prices, (iv) exploitation and exploration successes, (v) continuity of mineralization, (vi) uncertainties related to the ability to obtain necessary permits, licenses and title and delays due to third party opposition, (vii) changes in government policies regarding mining and natural resource exploration and exploitation, (viii) competition faced in securing experienced personnel, access to adequate infrastructure and equipment to support mining, processing, development and product manufacturing activities, and (ix) continued availability of capital and financing, and (x) general economic, market or business conditions impacting the economy in general or the graphite industry specifically.

Readers are cautioned not to place undue reliance on this forward-looking information, which is given as of the date it is expressed in this presentation, and the Company undertakes no obligation to update publicly or revise any forward-looking information, except as required by applicable securities laws. For more information on the Company, investors should review the Company's continuous disclosure filings that are available at www.sedar.com.

Qualified Person Statement

Mr. William T. Ellis, P. Geo. and Vice President of Alaska Earth Sciences Inc., has reviewed and verified the scientific and technical information contained in this presentation. Unless otherwise indicated, Mr. Ellis is a Qualified Person within the meaning of National Instrument 43-101 - Standards of Disclosure for Mineral Projects ("NI 43-101") and an independent consultant to Graphite One Inc. For details of the Graphite One Project, including the quality assurance programs and quality control measures applied and key assumptions, parameters and methods used to estimate the mineral resource set forth in this website for the Company's Project, please refer to the NI 43-101 Technical Report entitled 2019 NI 43-101 Mineral Resource Update for Graphite Creek, Seward Peninsula, Alaska USA, prepared for Graphite One Inc. by Natalie King, Alaska Earth Sciences, Inc., Chris Valorose, Valorose Consulting, Inc. and William Ellis, P. Geol., Alaska Earth Sciences, Inc. dated May 2, 2019, available on the Company's profile at sedar.com.
“We’re not a mining company... We’re a tech company that mines graphite.”

Anthony Huston
CEO, Graphite One
Graphite One Inc. has defined North America’s largest high-quality graphite deposit – Graphite Creek, situated on the Seward Peninsula about 60 kilometers north of Nome: Projected to be a long-life source of supply for the proposed second link in Graphite One’s advanced graphite materials supply chain — the Company’s advanced material manufacturing plant.
From Mine to Material Manufacturing

With its vertically-integrated approach from mine to material manufacturing, Graphite One’s intent is to produce high-grade anode material for the lithium-ion Electric Vehicle battery market and Energy Storage Systems, with additional production for a range of value-added graphite applications.
“We’re in the midst of a global battery arms race.”

Simon Moores
Benchmark Mineral Intelligence
Surging Graphite Demand

All of these manufacturers and more will require a reliable source of graphite for their EV fleets.

Our Advantage.

Graphite One Project’s Proposed Annual Production
41,840 MT Coated Spherical Graphite
13,500 MT Graphite Powder

In 2020, the United States imported 58,000 metric tons of natural graphite to meet demand – an amount nearly equal to Graphite One’s projected annual production.

The Property consists of 176 mining claims covering 9,583 hectares (23,680 acres) and is comprised of:
- One hundred and thirty-five State of Alaska state mining claims; and,
- Forty-one State selected mining claims.

STAX® Graphite

Graphite One’s graphite mineralization has been discovered to be distinct from other known graphite materials as it exhibits naturally the morphological characteristics of an already-processed material.

To highlight these unique properties, the Company has branded Graphite Creek graphite by the acronym “STAX”: “S”, as in Spheroidal; “T”, as in Thin; “A”, as in Aggregate; and, “X” as in Expanded. The Company has registered the trademark “STAX” in the United States and Canada.

STAX’s semi-spheroidal shape may result in a high-yield, more efficient process to produce the Coated Spherical Graphite required for Li-Ion and EV Batteries.
Graphite One’s intent is to produce and process graphite concentrate into Coated Spherical Graphite for use in lithium-ion batteries – including EV Batteries. The Company intends to produce other forms of advanced graphite for industrial and technology manufacturing. Preliminary test work suggests that STAX Graphite could be well-suited for processing into high-purity nuclear-grade graphite, fire suppressant graphite foam, and industrial diamonds for next-gen semiconductor substrates.

Graphite One
Doug Smith, B.Sc.EE, P.Eng., ICD.D  
Executive Chair + Director, Chair, Audit Committee

Mr. Smith has over 35 years of experience in the international coal industry as a senior executive and corporate director. He was General Manager of Xstrata Coal Canada from mid-2011 to mid-2013 following Xstrata Coal’s purchase of First Coal Corporation in 2011. As President, CEO and Director of First Coal since May 2007 Mr. Smith raised over $50 million in equity and directed its sale to Xstrata. For the preceding twelve years, Mr. Smith served as President and Director of Andalex Resources Inc., a private U.S. coal company, until he successfully directed its sale in 2006.

Anthony Huston  
President and CEO + Director

Mr. Huston is a successful entrepreneur with a background in tech sector business development and finance. Having served as Managing Partner in both public and private companies, he has played an integral role in raising more than $150 million in his career. Mr. Huston has served as an adviser on financial and acquisition transactions in industries ranging from the resource sector and real estate development to bio-technology and information technology.

W. Alan Ahlgren, CPA, CA  
Chief Financial Officer and Corporate Secretary

Mr. Ahlgren has more than 35 years experience having served as CFO with various mining companies, including Montem Resources, Atrum Coal, AQM Copper Inc. and with First Coal Corporation, until its purchase by Xstrata Coal Canada. Prior to First Coal, Mr. Ahlgren served as Vice President Finance with Kinross Gold Corporation.
Management

**Zhengli (Andrew) Tan, M.SC.E**
Director, Graphite Products Manufacturing

Mr. Tan has been an independent consultant to the carbon and graphite materials industry for the past eight years, with particular emphasis on manufacturing graphite anode materials and other advanced graphite products. He has over two decades of industry experience, including as General Manager of SGL Carbon Group’s graphite foil manufacturing plant in China and having held several technical positions in the industry in the United States and Canada.

**Stan Foo, B.A. Geo**
Chief Operating Officer

Mr. Foo has over 40 years of experience in the mining sector, including 24 years in Alaska where he is also active in trade organizations and advisory groups, including Alaska Miners Association, Resource Development Council for Alaska and BLM Alaska Resource Advisory Council. He serves on the board of the Iditarod Trail Committee. He was President and General Manager for Donlin Gold LLC, General Manager for Alaska Gold Torrent, Chief Geologist and General Superintendent for Cortez Gold Mines (Nevada) and has held Project Manager roles with Placer Dome and Barrick Gold Corporation. He also served as Mining Section Chief at the Alaska Department of Natural Resources.
Strong Alaskan Support

Graphite One has strong support from the Alaska federal delegation.

“Graphite Creek is the largest deposit of graphite in the Nation, and would be a superior domestic supply of this critical mineral, which is necessary for modern batteries, renewable energy technology, and many other high-tech uses.”

The Honorable Mike Dunleavy
Governor of Alaska, October 2019
A High-Priority Infrastructure Project

Alaska Governor Mike Dunleavy nominated Graphite One project as a High-Priority Infrastructure Project in October 2019.

The nomination entitled Graphite One to put its project before the Federal Permitting Improvement Steering Council (FPISC), which assesses projects against 9 “covered sectors” under the Fixing America’s Surface Transportation Act (FAST Act), signed into law Dec. 4, 2015 by President Obama. Graphite One’s project was found to qualify under both the “renewable energy” and “manufacturing” sectors — which demonstrates the versatility of natural graphite.

The Dashboard ensures that federal permitting agencies coordinate their project review authorities, resulting in a more efficient process, with more transparency for state agencies and the public. FPISC designation does not remove any of the environmental standards or permitting requirements necessary for the Graphite One project. FPISC designation enhances and illuminates Graphite One’s ongoing commitment to local stakeholders for a transparent and thorough permitting process.
Work Program: Complete PFS & 2021 FIELD PROGRAM

With additional funding completed in February 2021, work on the PFS resumed in March 2021. Metallurgical test work was completed. Design of the mine, mine facilities and infrastructure, primary processing and infrastructure, and secondary (product) processing and infrastructure is ongoing and in the final review stage. The PFS report is progressing with release of final results expected to be in Q4 2021. Project updates to local communities and interaction with our Subsistence Advisory Council are ongoing.

The 2021 summer field program was carried out to collect information for the planned Feasibility Study (“FS”). The Field Program included infill and step out core drilling in the resource area and additional core and sonic drilling for geotechnical data collection in the proposed mill site and dry tailings/waste rock storage areas. Other work included access route engineering, surface water and groundwater hydrology studies, wetlands mapping and aquatic life surveys. A total of 2,052 meters were drilled during the 2021 program including 1,695 meters of HQ core drilling and 357 meters of sonic drilling. Results from 8-hole core holes completed in the resource area are expected to be released in Q1 2022 when data analysis is completed. Additional core drilling was completed to collect detailed geotechnical information for open pit and mill site engineering, and for groundwater investigations. The 5 sonic holes completed in the dry tailings/waste rock storage area will provide detailed geotechnical information to advance the engineering of these facilities. The drill program will generate additional information to update the resource model and provide technical data for the FS expected to be initiated in 2022. The field program began in June and was substantially completed in mid-October.
The Right Time for Graphite One

- Demand rapidly rising
- U.S. currently 100% import-dependent
- Renewable Energy / Tech Manufacturing / National Security all depend on reliable graphite supply chain
tech materials
for global ingenuity.
